

Length and quality of cables in use have a decisive influence on the quality of your signal transmission.

Transmission cables and extension cables supplied by EBS are of high quality. This guarantees a perfect signal transmission - even for long distances.

All cables are available in different lengths and types. Pins and sockets of our cables are mostly gold-plated and of high quality. The different types of cables can be delivered on roll, or individually prefabricated.

On demand we can produce individual cables in any color (RAL color scale) or with any imprint (e.g. your webpage).

If you have special wishes or requirements, please feel free to contact us.

VGA – Cables

High Quality VGA extensions and connection cables for projectors/LCD/plasma

- 4 coax-wiring internal, 75 Ohm
- 15 pole pin - 15 pole socket (VGA) as extension
- 15 pole pin - 15 pole pin (VGA) as connection cable
- prefabricated / machine made
- polarized plugs / high quality contacts
- UL certified

VGA cables are available from 1 m to 30 m (male-male, or male-female), or 100 m coiled and prefabricated (without plug).

Order your "individual" VGA-cable! With a purchase of 3,000 meters or more, we can produce the cables in different colors or with an imprint.

DVI - Cables

alphadidact DVI cables are of high quality and are especially made for the use of digital screen transmissions with high resolutions.

- DVI-D connection cable pin (24+1)/pin (24+1)
- HDTV resolutions up to 1080p
- PC resolutions up to 1920 x 1200 / 60 Hz
- prefabricated / machine made
- polarized plugs / high quality golden contacts
- UL certified
