

EBS equips training rooms at German Ministry of Justice Academy

Training rooms set up at various locations in Hessen (Germany)

June 2023 - EBS Heusenstamm, Germany

Employees of the Hessian courts, public prosecutor's offices, correctional facilities and the Hessian Ministry of Justice can rely on a comprehensive range of further education and training courses from the IT department of the Hessian judiciary.

From the Oct. 2022 to July 2023, the training rooms at four IT center academy locations were equipped with digital multimedia systems from EBS Euchner Büro- und Schulsysteme GmbH.

The alphadidact® digital multimedia system includes 1+12 to 16 double-screen workstations, document cameras, laptops and two 85" displays.

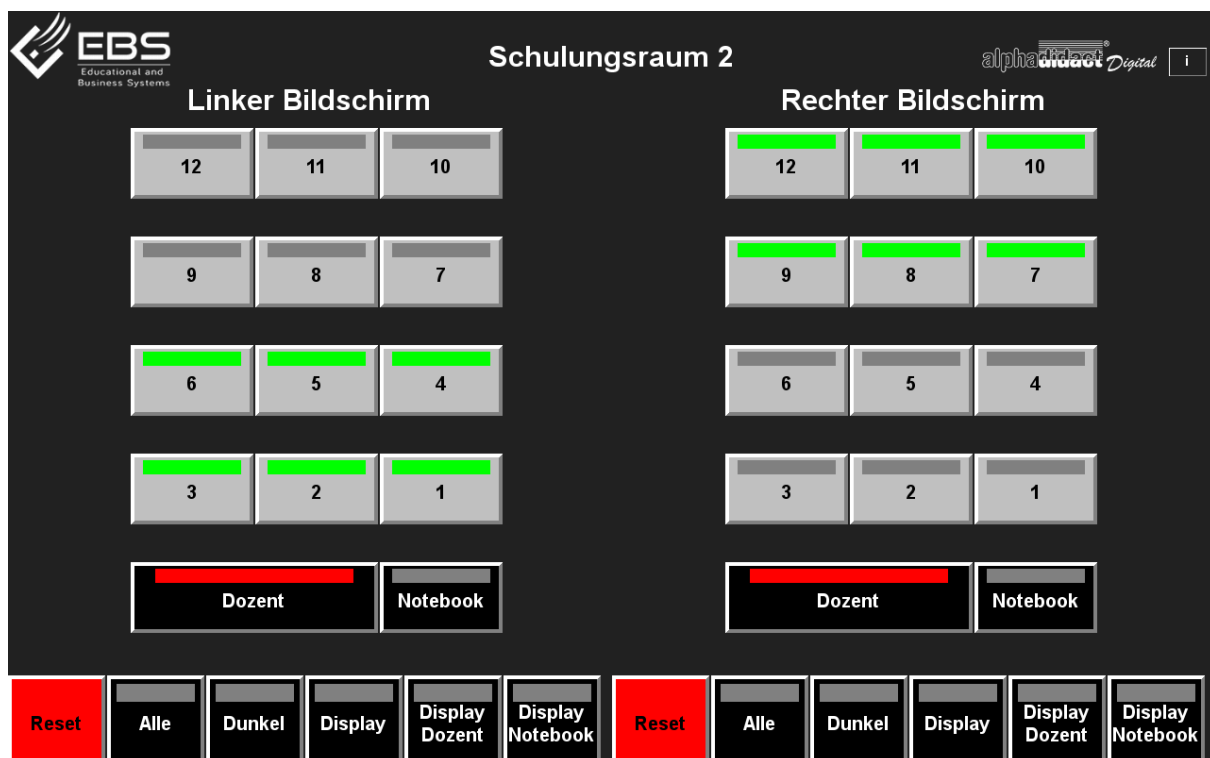

Photo from a training room at the IT department (4 rows of 3 workstations each, each with two screens per seat)

A 10" touchscreen from EBS is available to operate the multimedia system.

If desired, the lecturer can control the PCs and screens of the individual participants selectively or as a group. Very intuitive, with just one touch of a button, you can e.g. B. the “left” signal from “lecturer” can be transmitted to participants 1-6 and at the same time the “right” signal can be transmitted to participants 7-12. It is also possible to send two different signal sources to the two 85" displays, e.g. B. as a comparative representation.

By being able to broadcast a participant to all other screens, training courses can be made more interactive and effective.

Touchscreen in room 2 | 2 x 1+12 places (two screens each “left” and “right”)

The respective 10" touchscreen is individually adapted to the training room.

In addition to the operation via the 10" touchscreen, lecturers also have access to an iPad including the EBS alphadidact® app.

As part of the standard scope of delivery, alphadidact® Digital already offers one signal input per participant seat, e.g. B. for connecting any tablet or notebook.

Interactive and lively training courses are only possible through the involvement of individual training participants. Every workstation can be switched as a signal source and thus turned into a “presenter”.

Even in the back rows of the training laboratory, participants can follow the respective training content in optimal quality and see it in detail.

Alphadidact® digital multimedia systems are developed by EBS in Germany and are already in use in numerous training rooms worldwide.
