

Training with state-of-the-art technology | Dental Academy, Oslo

Colosseum Academy decides for digital multimedia systems from EBS

The Endolnn / Colosseum Academy, headquartered in Oslo / Norway, has purchased the multimedia system alphadidact Digital, manufactured by EBS Euchner Büro- und Schulsysteme GmbH, for their new dental training laboratory.

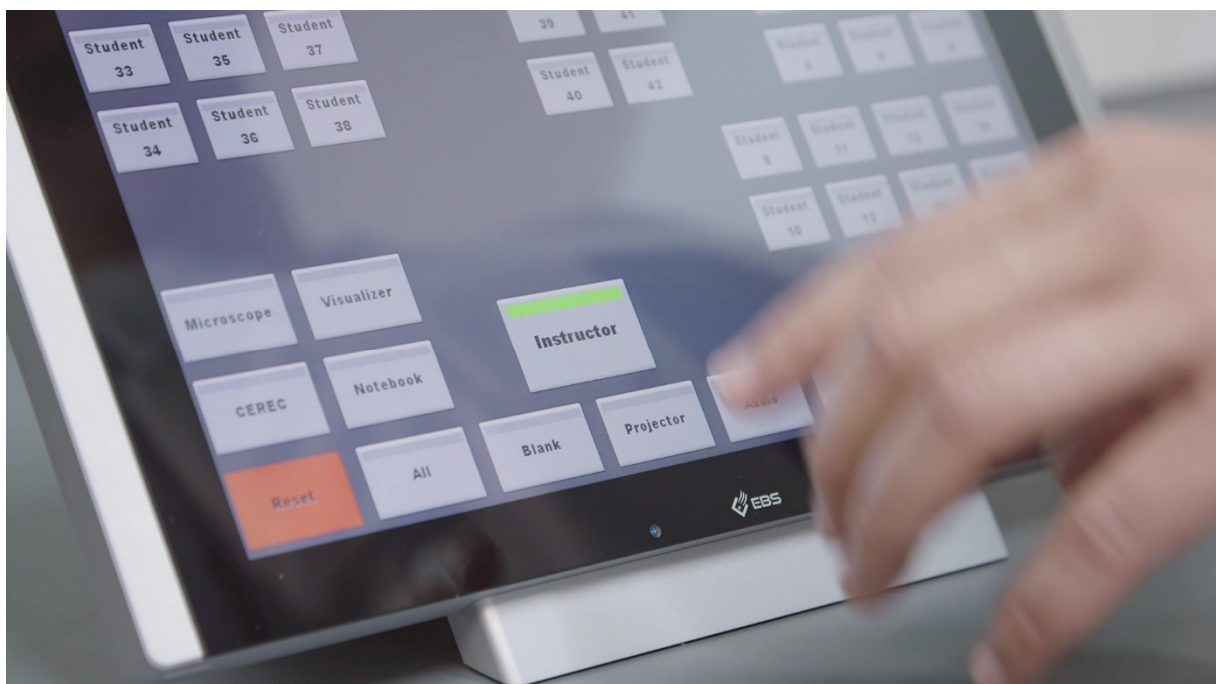

At a total of twelve newly equipped simulation workstations, the students of the Dental Academy can be trained with the state-of-the-art dental technology.

All workstations are visually networked with the alphadidact digital system.

With the innovative multimedia system, signal sources are broadcasted to all monitors in full resolution and without delay.

By the push of a button, the Professor transfers signals of a 3D microscope, an intraoral camera or a tablet to all workstation screens.

Students can follow the instructors work at their stations, in real-time and high quality.

CASE STUDY

In addition, each individual student simulation station can be selected and broadcasted to all monitors. This allows an interactive collaboration between students and the professor.

Visitor groups can follow the practical courses in a "seminar room". Through the "coupling" of simulation - and seminar room, practical and theoretical components of the respective training can be visualized.

The digital multimedia systems are manufactured by EBS in Germany and are already in use in numerous dental simulation labs worldwide.
